

Nonwovens for blades

Reduce production costs, save materials, save time.

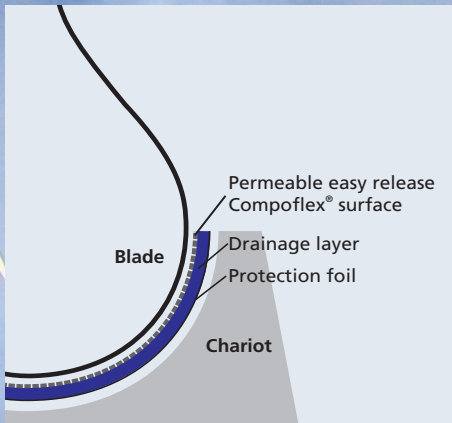

UV-protection - high resistance to puncture

Blade cover

UV-protection of blades

Fibertex wing covers effectively stops UV-light penetration. The strong and durable fabric is resistant to sharp edges. The covers are delivered cut into shape. Easy manual installation: Both sides of the blade can be covered in 10 min. by two people requiring only ½-1m working space.

Easy release surface

Chariot cover

Transportation protection

Fibertex chariot cover effectively protects the blades from damage during transportation in chariots. Water is drained from the surface preventing bubble-up of paint. The easy release surface ensures easy removal of the blade even when the paint is not 100 % hardened.
