

PAMPER YOURSELF, AND YOUR GARDEN

Fibertex® Home and Garden

Hamper the horizontal growth of roots

- Reduces the damages on walkways, terraces, garden ponds, sewerage systems and the like caused by roots growing wild
- Helps the roots to grow downwards instead of along the ground surface
- Should be put down vertically along the edge of the hole, for instance when planting a new hedge, tree or shrub

RootSeal™

If you don't want roots to damage your pavement, garden pond or sewerage system, you should use **RootSeal™**.

RootSeal™ is a root hamper. It does not control all kinds of roots, but reduces the extent of their growth considerably.

In case of very aggressive kinds of roots such as bamboo, use two layers of **RootSeal™**.

Reduce weeds in garden beds and rockeries

- The black fabric prevents the light from penetrating and stops the weed's growth
- Allows water, fertiliser and air to penetrate, but stops weeds from below
- Optimum growth conditions for the plants – the fabric holds water and provides constant soil temperature

For aggressive kinds of weed – couch grass, horsetails and the like – use two layers of **WeedControl®**.

WeedControl®

If you don't want to struggle with the tough weeds, **WeedControl®** is the best solution for minimal maintenance in your garden.

WeedControl® is a 100% environmentally-friendly solution.

Avoid ruts in the driveway

- The fabric distributes the pressure load and gives you a beautiful and even driveway for many years
- Water easily penetrates through the fabric and prevents your pavement from skidding
- Can be used for all applications where **Patio** is suitable

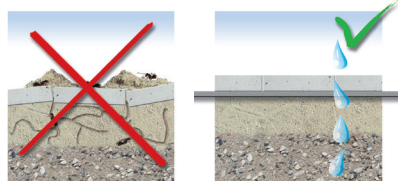

Patio®

A newly-laid driveway helps your house make a great first impression. **Patio**® is the basis for a beautiful long-lasting driveway.

Patio® is used under areas subjected to heavy loads such as driveways, parking areas, storage areas, playgrounds etc.

Avoid anthills on the patio

- The fabric prevents the sand from being pushed up and making the pavement uneven
- Water easily penetrates through the fabric and prevents your pavement from skidding
- Can also be used for perimeter drain, fascine and stone drain, sandbox, covering etc.

Patio®

If you don't want ants to invade your patio, place **Patio**® underneath your pavement. You will then enjoy a beautiful and even patio for many years.

Patio® is used for lightly loaded areas such as patios and walkways.

- AND MUCH MORE WITH

Fibertex® Home and Garden

Ensure a good foundation for the playground

Protect against dirt

Optimise drainage

Use the fabric in raised beds

Fibertex® Home and Garden products are easy to cut, sew and staple.
